12. (previously amended; previously allowed): A fenestration for receiving siding in association with an architectural structure, comprising:

a fenestration frame;

a brickmoulding affixed to said fenestration frame for receiving siding, comprising:

a rectangular portion comprising a width, a length, said length being greater than said width, and a thickness, said rectangular portion further comprising a bottom surface and a top surface, said bottom surface for overlying a building structure;

a flange portion carried in approximately parallel relationship by said bottom surface of said rectangular portion, said flange portion extending beyond said width of said rectangular portion; and,

a channel for receiving siding, said channel being formed between said flange portion and said top surface;

said channel further comprising therewithin a step portion adjacent the bottom of said channel, whereby the channel so formed is adapted to cooperatively receive differing thicknesses of siding.

13. (original; previously allowed): The fenestration of claim 12 wherein said top surface further comprises a decorative portion extending from and carried by said top surface.

14. Canceled

15. (original; previously allowed): The fenestration of claim 12 wherein said flange is formed integrally with said brickmoulding.

16. (original; previously allowed): The fenestration of claim 12 wherein said flange is affixed thereto adjacent said bottom surface by a fastener.

17. (original; previously allowed): The fenestration of claim 16 wherein said fastener comprises a cooperating barb and kerf.

18. (original; previously allowed): The fenestration of claim 12 wherein said flange further comprises pre-formed holes or openings to receive a fastener.

19. (original; previously allowed): The fenestration of claim 12 wherein said brickmoulding comprises cellular polyvinyl chloride.
